WIKAI

Part of your business

WIKA Instruments India Pvt Ltd, established on September 2, 1997, is a wholly-owned subsidiary of WIK-A Alexander Wiegand SE & Co. KG, Germany, a global market leader in pressure, temperature and level measurement technology, and also in the fields of flow measurement, calibration and SF6 gas solutions. WIK-A Instruments India has established and operates a quality and environment management system according to requirements of international standard (ISO 9001, ISO 14001).

Mechanical Pressure Measurement

In mechanical pressure measurement, measuring instruments are used with pressure elements that deform elastically under the influence of a pressure which is positive or negative in relation to atmospheric pressure (ambient pressure). In contrast to measuring instruments using electronic pressure measurement technology, they do not require any power supply for operation. Alongside their simple operation, their advantage lies in their marked robustness. WIK-A offers mechanical pressure measuring instruments with scale ranges from 0 ... 0.5 mbar up to 0 ... 7,000 bar and accuracies of up to 0.1%.

Features -

- The movement used is made in Switzerland which is the best in class
- The Bourdon & Movements are manufactured on full automated machine without any manual intervention
- The PG of dial diameter 100 & 160 mm do not have pointer stopper at "Zero" which ensures the calibration accuracy of Gauge at any point of time (No Zero shift)
- All gauges are manufactured accordance Std. EN837-1
- Vacuum protection safety is available for special requirements.

Measuring instruments for ventilation and air-conditioning

With the air handling product line, WIK-A offers a comprehensive range of measuring instruments for ventilation and air-conditioning applications. Differential pressure gauges, switches and transmitters are used for monitoring filters and ventilators. Air flow meters and air velocity transmitters measure the air flow and the air velocity in air ducts and air-conditioning systems. In addition, the digital ventilation duct temperature sensor and the ventilation duct sensor for relative humidity and temperature are available to measure the temperature and humidity in ventilation and air-conditioning systems.

Features -

- Two-part construction (measuring element and case) provide accuracy and durability.
- Integrated sealing element for direct installation
- Protected against dust and water jets, IP65 & Ip54
- Available as a built-in or add-on version
- Simple and quick mounting

Diaphragm Seals

WIKA diaphragm seals (often also referred to as chemical seals), mounted with pressure gauges, process transmitters, pressure switches etc., are recognised and valued internationally for the most difficult of measuring tasks. By using diaphragm seals, the measuring instruments can be used at extreme temperatures from -90 to +400 °C and with aggressive, corrosive, heterogeneous, abrasive, highly viscous or toxic media.

Features -

- Wetted materials in several grades of stainless steel and alloys.
- Many accessories, including flushing rings and ports, saddle and block flanges, capillaries, and cooling elements.
- the All-Welded System(AWS), where the gauge and DS are permanently fused to create one sealed pressure measuring instrument.

Electronic pressure measurement

WIKA offers a complete range of electronic pressure measuring instruments: pressure sensors, pressure switches, pressure transmitters and process transmitters for the measurement of gauge, absolute and differential pressure. Our pressure measuring instruments are available in the measuring ranges 0 ... 0.6 mbar to 0 ... 15,000 bar. In electronic pressure measurement, a sensor receives the pressure to be measured, or the change in pressure, and converts it into an electrical signal.

Advantages -

- Pressure sensors include: Metal thin-film, ceramic thick-film and piezoresistive.
- High IP ingress protection
- Accuracies of up to 0.125 % BFS
- Numerous gauge, absolute and vacuum measuring ranges available.

High quality mechanical pressure and temperature switches

Pressure switch models with various measuring principles cover all settings ranges from 0 ... 16 mbar to 0 ... 600 bar. Temperature switches are available for measuring ranges from -30 ... +70°C to 0 ... 600°C. For use in hazardous locations all instruments are also available with explosion-proof enclosure (Ex-d IIC T6) or intrinsically safe (Ex-ia IIC T6).

Features -

- Internal set point adjustment for critical applications.
- Switch point repeatability +/- 0.5% for reliable switching.
- Robust Aluminium, SS case
- High Quality microswitch with long service life.
- Two set point option for controlling at different process levels.

Mechanical temperature measurement

The mechanical temperature measuring instruments work on the bimetal, expansion or gas actuation principle and cover scale ranges from -200 ... +700°C. All thermometers are suited for operation in a thermowells as required.

Features –

- All gauges are manufactured in accordance to std. En13190
- Over temperature safety is available
- External Zero adjustment facility is available
- We can offer up to 100 metres of capillary for Gas filled Temperature Gauge.

Electrical temperature measurement

The WIKA product portfolio includes thermocouples, resistance thermometers (PTC and NTC) with integrated connector or connected cable and versions with connection head. Measuring ranges from -200 to +1,600°C are converted. Temperature switches, analogue and digital temperature transmitters, temperature controllers and digital indicators complement our range of products.

Features –

- Availability of different process (Tri clamp, in gold, Neumo Biocontrol) is providing solutions for temp. measurement in Food & pharma segment.
- Also use of thermowells for sanitary applications is avoiding direct contact of measuring sensor with sensible process media.

GAYESCO

Engineered product solution for tubeskin application & multipoint temperature measurement. Wika and Gayesco have been among the world leaders in the refining and petrochemical industry for more than 50 years. Gayesco pioneered flexible multipoint thermocouples & tubeskin sensors that have become the industry standard for the refining and petrochemical market. With an engineered solution, the Gayesco brand of multipoint sensors & tubeskin sensors for the Wika group will provide you a complete solution for your needs.

Features-

- Thermocouple protect reactor vessel wall integrity.
- Fast response to temperature changes.
- Easy removal for access during catalyst changes.
- Early coke detection and applicable with direct flame impingement.

Level measurement

We operate on your level: WIKA has a comprehensive range of level monitoring products available for temperatures up to 450 °C, densities from 400 kg/m³ and pressure ranges up to 500 bar. The product spectrum includes bypass level indicators, submersible pressure sensors, sight glass level indicators, magnetic float switches and optoelectronic switches. Customer-specific special designs complete the WIKA offering.

Features -

- Level displayed proportional to volume or height.
- Absolute measuring redundancy possible.
- The reliable and proven operation principle is suitable for a very wide range of applications.

Flow measurement

Our product range for primary flow elements includes orifice plates, meter runs, flow nozzles, venturi tubes, pitot tubes and restriction orifices. Our portfolio also includes flow switches and air flow sensors. With this broad product range, we are able to cover almost all industrial applications.

Features -

- Flow meters based on DP type method.
- Flow meters complying with ISO 5167, ASME PTC 19.5, AGA-3, RW Miller Standard.
- Flow meters fully Assembled with DPT and manifold. READY TO GO.
- Customization in Flow Meters available as per to customer's need.

Force measurement

The product programme in force measurement comprises force transducers, load cells and hydraulic force measurement. The portfolio includes tension and compression force transducers, strain sensors, shear beams and bending beams, single point load cells, load pins, tension links, ring and special force transducers as well as electronics and complete systems.

Features -

- 3 technologies under 1 roof
 - Strain Gauge / Bonded Gauge
 - Thin - Film Technology (Only supplier in the world)
 - Hydraulic Load cells
- Customized Solutions for all your Force Measurements
- Solutions instead of product sales
- Harbours & Ports presence

Innovative SF6 Life Cycle Solutions

In order to operate plants with SF6 gas properly, a variety of specialised equipment is needed. WIKA offers a complete product portfolio and the necessary application experience in the area of SF6 lifecycle.

Advantages -

- Sealed, tamper-resistant case
- Reliable switch point setting
- No influence and condensation problem
- Constant indication with temperature changes

Accessories

A wide selection of pressure, temperature, flow and level measuring instruments and to our calibration technology can be found in the WIKA accessories.

Features –

- Back seat arrangement in Needle Valve and Manifolds.
- Low Torque requirement for rotation of the valve in new two-piece design.
- 100% Valve are Leak Tested.

Calibration technology

Highest precision for each requirement: WIKA offers a broad product range of calibration instruments for the physical units of measurement for pressure and temperature, and for electrical measurands. A multitude of specific patents ensure unmatched performance characteristics with many of our calibration instruments. The range of services comprises the calibration of measuring instruments in WIKA's own accredited DKD/DAkkS calibration laboratories and a mobile service to calibrate your instruments on site.

Features -

- World leader in primary standards for pressure and temperature
 - For Pressure - Mensor USA, DH-Budenberg UK & France
 - For Temperature - Automatic Systems Laboratories (ASL) UK
- Customized product and third party product integration to Test and calibration bench system.
- Onsite Calibration facility with Mobile Van
- Next to CSIR-National Physical Laboratory of India, WIKA Pune calibration laboratory leading in Pressure parameter.

NABL Calibration services

Every measuring instrument is subject to ageing as a result of mechanical, chemical or thermal stresses and thus delivers measured values that change over time. This cannot be prevented, but it can be detected in good time by calibration. Use our calibration service for your pressure measuring instruments in order to minimise safety risks.

Features -

- NABL C0133(Pune), NABL C-0266 (Chennai), NABL C-1107 (Faridabad)
- Pressure Abs to 5000 bar with CMC starts from +/- 0.003% Rdg.
- Parameters are pressure, vacuum, temperature, mass & liquid flow.
- Temperature -35 to 1200°C, CMC starts from 0.1°C.
