CERTIFICATIONS

GRADES OF PURITY

AR (Analytical Reagent) : Reagent useful for analytical purpose and research work where high purity is essential. The certificate of guarantee give the minimum assay and maximum limits of trace impurities. These reagents complies maximum tests of ACS grades, GR , ANALAR, P.A.(Proanalysis) which are marketed by other international companies.

FOR SYNTHESIS : General purpose reagents having many potential applications in laboratories.

EXTRA PURE, PURIFIED : Products suitable for qualitative and semi-quantitative work. Most of our extra pure: products comply with "Pharma Copoeia" grades of all countries and preferentially used in the Pharmaceutical industries.

MICROSCOPY (M.S.) : Highly purified reagent for use in biochemical research and analysis. They are free from inhibitors such as traces of heavy metals and tested with a view for biochemical work.

HPLC GRADE : This grade includes solvents, ion pair reagents and buffers of appropriate purity to be used as mobile phases in HPLC, particularly for biomolecular and ion separation. Key parameters such as UV absorbance, transmittance, non-volatile matter, moisture content, fluorescence impurities and assay are very carefully controlled.

SPECTROSCOPY GRADE : These are solvents of high optical purity of UV / Visible / IR / Fluorescence / NMR and Mass spectroscopy. The certificate of guarantee includes assay, minimum transmission at certain defined wavelengths in UV range, moisture content, non-volatile matter etc.

ION PAIR CHROMATOGRAPHY : Highly pure additives for ion pair chromatography are suitable for detection in the low UV range. Reagents of this special quality inspected by means of a filter test, a cyclovoltogram and gradient test at 205nm.

SINGLE ELEMENT STANDARD SOLUTIONS FOR AAS, ICP : AAS and ICP standard solutions are ready to use and traceable to NIST. These are manufactured from high purity D.I. Water, metal-free acids and high-purity metal and metal salts.

FOR BIOCHEMISTRY : The reagents are suitable for biochemical studies and are tested for heavy metals, insoluble matters and other product specific critical parameters.

FOR MICROBIOLOGY : Microbiological culture media ingredients are free from toxic inhibitors and ensure optimum microorganism growth in culture media. These products are used in pharmaceutical, biotech, and clinical research and are available in small and bulk packs.

FOR MICROSCOPY : The range of stains and reagents used in clinical diagnosis through Histology, Cytology and Haematology examination, these stains and reagents are tested for chemical purity and functional performance.

FOR MOLECULAR BIOLOGY : These reagents are additionally verified for their suitability in Molecular Biology experiment and identification of microorganism.

EL GRADE : The grade of solvents are purified specifically for use in Electronic Industries.

GC GRADE : The GC grade solvents are used as a Diluent for Pharma, Pesticide in Food samples & pollutants in Environmental samples in Gas Chromatography Analysis.
